Welcome to June Newsletter from SKIPPER Electronics!

Great success with SKIPPER ETS50200 50/200 kHz Dual Transducers:

The dual transducer (50/200 kHz) is a great success. We have now produced a large number of this dual transducer. The dual transducer is designed to work with SKIPPER ESN100 and ESN200 Echo Sounders. Both Echo Sounders may be set up to automatically change between the frequencies depending on the depth below the transducer.
In addition to all SKIPPER bottom housings, we also have a special version that is designed to fit into the Elac LSE297 and LSE313 Tank.

Please see all versions of the ETS50200 transducer in the link below!

Delays due to world shortage of components!

Producing electronics is a challenge now, we are doing all we can to secure components for our products for the next years. Sometimes things do not arrive when promised, and this causes knock-on delays. We are informing you of delays as soon as we ourselves know. We kindly ask for your patience in these cases, contact us if the delays cause you large problems, and we will try to find alternative solutions.

We are sorry for the inconvenience this may cause! **We encourage you to place your order as early as possible!**
We do also experience increase in freight cost and delays throughout the market!
It does not seem like this situation will resolve anytime soon!

5% price increase on all SKIPPER products from 01.08.2022:

All suppliers have now increased their prices drastically! SKIPPER is therefore forced to increase all prices with 5% starting from 01.08.2022. We are sorry for this price increase!

New software for use with ETS dual transducers:

With the release of ETS50200 transducers, we have also now updated the ESN200 software to version SW-M008/10-1.1.4, This software restricts the maximum power output of some of the transducers, particularly the ETS50200. This software should be installed in all systems with ETS transducers
Software is available here:
